Leon Li

Software Engineering Internship Candidate

Perth, Western Australia | ziangli092@gmail.com

GitHub: github.com/zombieli | LinkedIn: linkedin.com/in/leon-li-a52208375

Profile

Master of Professional Engineering student specialising in Software Engineering at Curtin University, with experience in Python, Java, Android development and functional testing. Completed a software engineering internship involving API integration and UI debugging. Seeking a software engineering internship in Western Australia, with an interest in device communication, testing and operational tools.

Technical Skills

Programming and data: Python, Java, SQL, NumPy, Pandas

Application development: Android Studio, Java Servlets, Tomcat, Vue.js, ElementUI, Axios

Integration and testing: REST API integration, JSON parsing, functional testing, UI debugging, MySQL, SQLite

Hardware: Custom PC assembly, hardware troubleshooting and thermal maintenance

Education

Master of Professional Engineering | Curtin University | 2025 - Present

Specialisation: Software Engineering | Expected graduation: June 2027

Coursework: Scalable Software Engineering; Requirements and Specification; Object-Oriented Software Engineering; STEM Research Methodologies.

Bachelor of Engineering | University of Aberdeen and South China Normal University

Dual qualification | 2021 - 2025. Studies included software testing and quality assurance, computer architecture, operating systems, networks and algorithms.

Internship Experience

Software Engineer Intern | Jun - Aug 2024

Shijiazhuang Kangmengde Intelligent Technology Co., Ltd | Shijiazhuang, China

- Developed login and user management interfaces for an Employee Management System using Vue.js and ElementUI, including validation, pagination and employee record CRUD operations.
- Connected frontend components to backend REST APIs using Axios, handling asynchronous requests and CORS configuration.
- Performed functional testing across application modules and fixed UI rendering defects.

Selected Portfolio Projects

Personal software engineering projects | October 2026

Device Diagnostics Lab | Python | Personal project | October 2026

- Implemented a TCP simulator, strict JSON validation, bounded retries and structured reports; 44 automated tests passed, covering communication faults, recovery and command exit codes.
- Recorded 11 simulator scenarios and a separate intentional failure. Synthetic data only; physical hardware has not been tested.

Field Service Workflow | Vue TypeScript FastAPI SQLite

- Implemented work-order state rules, atomic history updates and stale-version checks; verified 37 API tests, 27 demo tests and browser workflows against both service modes.

Workshop Scheduling Study | Python

- Compared FCFS and shortest-processing-time dispatch across 22 synthetic scenarios, with independent constraint checks and 36 tests; preserved the trade-off between average and longest wait.

Additional Information

Availability: Preferred start January 2027; available from November 2026. Full-time during university holidays, subject to visa conditions.

Work rights: Student visa subclass 500.

ACS student member | Fluent English and Mandarin | Australian driver licence Class C-A

First aid training: HLTAID011, HLTAID010 and HLTAID009.
