Professional Summary

Software Engineering master's student at Curtin University, graduating 06/2027, with internship experience in Vue.js, REST API integration and functional testing. Portfolio projects demonstrate Python, TypeScript, SQL, automated testing and offline applications. Seeking a software engineering internship in Western Australia.

Education

Master of Professional Engineering | Curtin University | 2025 - Present

Software Engineering specialisation | Expected graduation: 06/2027

Relevant coursework: Scalable Software Engineering; Object-Oriented Software Engineering

Bachelor of Engineering | University of Aberdeen and South China Normal University

Dual qualification | 2021 - 2025

Skills

Languages: Python, Java, TypeScript, JavaScript, SQL

Web and data: Vue.js, FastAPI, REST APIs, SQLite, MySQL, IndexedDB

Testing: unit testing, integration testing, pytest, Vitest, Playwright

Tools: Git version control; GitHub Actions continuous integration (CI)

Portfolio: zombieli.github.io | GitHub: github.com/zombieli

Work Experience

Software Engineer Intern | 06/2024 - 08/2024

Shijiazhuang Kangmengde Intelligent Technology Co., Ltd | Shijiazhuang, China

- Developed login and employee-management interfaces with Vue.js and ElementUI, including form validation, pagination and employee record CRUD operations.
- Integrated REST APIs with Axios, handled asynchronous requests and CORS configuration, and debugged UI rendering defects through functional testing.

Projects

Personal projects | 10/2026 | Demonstrations use fictional or simulated data

Field Service Workflow | Vue.js, TypeScript, FastAPI, SQLite | Case study

- Built a work-order application with explicit state transitions, transactional history and version checks to reject stale updates; separated the local API from a browser demo.
- Passed 37 API tests and 27 frontend demo tests covering invalid transitions, rollback and stale-version rejection; documented the REST API contract and reproducible setup.

Device Diagnostics Lab | Python, TCP, pytest | Case study

- Built a local TCP simulator and diagnostics runner with strict JSON validation, bounded retries and traceable JSON/CSV reports for 11 normal, fault and recovery scenarios.
- Verified 44 automated tests, including TCP integration tests for malformed messages, disconnects, timeouts and recovery. Simulator only; no physical hardware validation.

Offline Inspection Notebook | JavaScript, IndexedDB, PWA | Case study

- Built a Progressive Web App (PWA) with offline drafts, read-only submitted records and atomic backup imports; rejected stale updates and locked fields during pending saves.
- Verified 35 unit tests and 20 desktop Chrome checks covering offline reload, transaction rollback, backup recovery, keyboard use and responsive layouts.

Additional Information

Start: 01/2027 preferred; available from 11/2026. Full-time during university holidays, subject to visa conditions.
Work rights: Student visa subclass 500.

ACS student member | Fluent English and Mandarin | Australian driver licence Class C-A
